Exam : **70-577**

Title : Microsoft Windows @
Embedded Standard 2009,
Development

Vendors : Microsoft

Version : DEMO

NO.1 You are creating a Windows Embedded Standard run-time image. You need to identify the file system component that meets the following requirements:

Set access level to files and folders for each user level.

Allow transparent encryption of files and directories for users and programs. Which component should you use?

- A. NTFS file system (NTFS)
- B. File Allocation Table (FAT)
- C. Compact Disc File System (CDFS)
- D. Universal Disk File System (UDFS)

Answer: A

NO.2 You are developing a Windows Embedded Standard device that contains multiple user accounts. You add the required number of User Account components. You need to configure the User Account components to meet the following requirements:

Users must be able to modify the system settings.

Users must be unable to install programs that affect the system files. Which User Type should you set?

- A. Guest
- B. User
- C. Power User
- D. Administrator

Answer: C

NO.3 You are creating a Windows Embedded Standard run-time image. You need to create multiple user accounts. What should you do?

- A. Add multiple instances of the User Account component to the SLX file.
- B. Add the Administrator Account component to multiple SLX files.
- C. Use Component Designer to create a component that includes a custom security template (.inf) file.
- D. Add the User Account component to multiple SLX files.

Answer: A
