What Client's Say

“ Passed the exam yesterday, but 10 questions new not came from this dump. every other questions are same. Totally valid. ”

Roy
★★★★★

“ This is still valid. Passed today with 80%. looked like 3-4 new questions. Many thanks! Good braindumps ”

Vic
★★★★★

Available Exam Cram and Valid Dumps - Lead2Pass Exam

Exam : **H13-629**

Title : **HCIE-Storage (Written)**

Vendor : **Huawei**

Version : **DEMO**

NO.1 In a clustered environment, data is placed on the shared storage, and identities between peers are equal and have the same access to the data. It is required that the clusterware have a control mechanism for concurrent access to such peer permissions. In Oracle RAC, you use the _____ mechanism to do multiple node-to-node collisions control of access.

- A. dlm
- B. asm
- C. vip
- D. ocr

Answer: A

NO.2 Create LUNs on an OceanStor V3 storage system. Set the initial space allocation policy to be automatic.

Create LUN 1, and 80% of its space comes from the capacity tier. Create LUN 2 in the same storage pool. It can be concluded that 0% of LUN 2's space comes from the performance tier.

- A. FALSE
- B. TRUE

Answer: B

NO.3 Using Simpana for backup, you set this policy as follows: The retention period of data is 15 days and 2 periods, once every 10 days. How many days will data be retained after the failure?

- A. 20
- B. 15
- C. 30
- D. 25

Answer: A

NO.4 The user backup client has sufficient resources and the production network resources are relatively tight. The amount of data scheduled to be backed up weekly is 1-2T. The backup window is 3 hours, using source-side de-duplication, deduplication ratio of 3, the bandwidth utilization value of 0.8. Based on this, what kind of networking can meet the backup business needs and investment least?

- A. FC LAN-free
- B. GE LAN-free
- C. 10GE LAN-free
- D. server-free

Answer: B

NO.5 Customers need to create a new Oracle database server Huawei RH5885. V2 32 nuclear CPU, the host using Redhat6.4 operating system, the text system is EXT4, the storage device Oceanstor V3, the I SAS disk and 8D

+ 1P RAID5 are configured to guide one million data batch. Which of the following methods can improve the import performance into the new database? (Multiple choice.)

- A. Modify Oracle's DB-BLOCK-SIZE parameters.
- B. Oracle database FILESYSTEMIO-OPTIONS parameter can be set to Asynch, and the file system log

off.

C. Redhat system default CFQ algorithm on the database business efficiency is not high, should be adjusted to noop algorithm.

D. Modify the value of DB-WRITER-PROCESSES.

Answer: B,C,D

NO.6 Huawei Oceanstor 9000 provides a single file system to the outside through the unified file system namespace management. Which of the following description is correct? (Multiple choice.)

A. A unified namespace provide users with a unified storage resource pool to achieve the centralized management of storage space and distribution.

B. Each file share directory is a subdirectory of the namespace.

C. The namespace is automatically created when HUAWEI OceanStor 9000 is started with the same name as the system namespace.

D. Namespaces as the root directory of the entire system can not be shared and visited, only if ask the subdirectories below it can be shared and visited.

Answer: A,B,C

NO.7 Users use storage foundation HA cluster software and two Huawei blade servers to build a highly available environment for enterprises to provide important business 7 * 24 hour service. One day due to an abnormal power failure one of the servers can not start normally. When the cluster server is in a wait state what command should be issued?

A. `hastart -all`

B. `gabconfig -cx`

C. `hacf -verify`

D. `net start vcscomms`

Answer: D

NO.8 Which of the following statements about Huawei OceanStor V3 series storage array synchronous remote replication and asynchronous remote replication is incorrect? (Multiple choice)

A. Troubleshoot a replication task in a remote replication consistency group Do not affect tasks in other groups

B. Synchronous remote replication and asynchronous remote replication are used snapshots

C. Synchronous remote replication and asynchronous remote replication should use the progress of the bitmap

D. Synchronous Remote Replication To use differential logging, asynchronous remote replication uses differential bitmaps

Answer: A,B,C

NO.9 Which description of the the OceanStor V3 file system snapshot feature is wrong?

A. Deletion Snapshots use a mechanism for reclaiming space, so snapshot data space is immediately freed after snapshots have been deleted.

B. File system snapshot data can not be deleted directly, and only after the snapshot has been deleted, this part of the space can be released.

C. In File System Snapshot when you create a snapshot, you simply copy the root of the file system

and save it to form a snapshot of the file system.

D. After creating a snapshot in the File System, as the main file system is continuously updated, the original data block will gradually become the space occupied by this quick debt. However, a newly written data will not be included in the snapshot space.

Answer: A

NO.10 Customers plan to use the intelligent partition feature of the OceanStor 18800 to implement LUN isolation and ensure the cache capacity of some special LUNs Volume. To do this, you must create smart partition meeting which of the following prerequisites? (Multiple choice)

- A.** All controller nodes are in normal state
- B.** Engine remaining cache of not less than 256M
- C.** Create a partition read and write cache the same size
- D.** The number of partitions created has not reached the limit

Answer: A,B,D

NO.11 Existing set customer of database uses a raw device, due to the large amount of data in the database. The customer plans to replace the old storage with new storage devices.

In the process of environmental inspection lvcb engineers found the following:

```
#getlvcb -TA sjklv
```

Intrapolicy =

copies = 0

interpolicy =

lvid =

lvname =

label =

machine id =

number lps = 0

relocatable =

strict =

stripe width = 0

stripe size in exponent = 0

type =

upperbound = 0

fs =

time created = time modified =

As the vg is too large, the expansion of vg is impossible. As the service window is very short, and customers do not want to avoid the risk of large adjustments of the whole original environment, what is the recommended approach?

- A.** Based on lvcb offset reconstruction nude equipment, and the database level 0 backup import
- B.** Use the dd command for data migration
- C.** Use migratepv for data migration
- D.** Use the cplv command for data migration

Answer: C

NO.12 Set the soft quota and hard quota using the OceanStor V3 file system quota feature. During

each IO writing operation, consumption of space capacity, if the number offiles exceeds the soft quota is the first to be checked.

A. False

B. True

Answer: A

NO.13 Maintaining a persistent connection between host and storage, ESXi must support multipathing. Which of the following statements is incorrect regarding multipathing for VMware vSphere 5.5?

A. In addition to path failover, multipathing also provides load balancing. Load balancing is the process of distributing I / O load across multiple physical paths.

B. In the event of a path failover, the virtual machine I / O delays Nintendo pump by 60s.

C. If the failover takes a long time to complete, the windows virtual machine may interrupt the I / O and eventually fail. To avoid this, set the windows virtual machine timeout to at least 30 seconds.

D. When coordinating vmware NMP and any installed third-party MPP, the PSA (Pluggable Storage Architecture) performs load and unload multipathing plug-ins and handles physical path discovery and removal.

Answer: C

NO.14 In order to support business expansion, a large enterprise has decided to purchase two Huawei OceanStor 9000 storage systems to replace the existing NAS systems. The two systems were deployed in two cities. The main operating system of the business operation time is 8: 00-18: 00. Which of the following description of disaster recovery on disaster recovery applications planning is correct? (Multiple choice.)

A. Because the client's business traffic is mainly concentrated in the daytime working hours, you can not set the replication zone bandwidth limit, the synchronization task on the non-workers make time, take full advantage of node bandwidth

B. Plan a separate directory for each type of service using the Huawei OceanStor 9000 system at the D and Y sites in the system's root directory as a remote copy of the master directory, and shared to the corresponding business server i

C. Info replication as an optional feature of Huawei OceanStor 9000de, the production sites and disaster recovery sites need only the production site to purchase info replicator feature of the license

D. For each type of business to create a pair for the type of business data replication synchronization

Answer: A,B,D

NO.15 The storage array provides the device LUN to the database. This LUN does not need to be labeled after being recognized by the host for the first time.

A. True

B. False

Answer: B

NO.16 Windows supports both MBR and GPT disk partitioning modes. For MBR disks, the following options are correct:

A. The total number of primary partitions and main expansion partitions does not exceed 4 and the

maximum number of primary partitions 4

- B. The maximum number of logical partitions on the main extended partition does not exceed 4
- C. Single partition capacity size limit of 1TB
- D. windows operating system can create up to 4 partitions

Answer: A

NO.17 Which of the following feature is correct about the OceanStor V3 volume mirroring? (Multiple choice.)

- A. You can configure a volume mirror for external LUNs or configure external LUNs as mirror copies.
- B. When configuring volume mirroring, mirror copies are required from different disk domains.
- C. After creating a mirrored volume for a normal LUN, the server read-write IO results in a change as a result of internal information exchange.
- D. The amount of data actually stored on a LUN is 2G, the total copy of the data is 4G. A volume image is created for the LUN, the LUN is mirrored when the copy is generated during system creation

Answer: A,B

NO.18 Which of the following are correct regarding the Simpana backup software? (multiple choice)

- A. The value of Data Reader must be less than the value of Device Streams
- B. Data streams: client to MediaAgent data transfer stream, set in the storage strategy
- C. Device Streams: MediaAgent to storage Media data transfer stream, set in each sub-client
- D. data Reader: The flow of raw data read from the client, set in each client

Answer: B,C,D

NO.19 Hot-plugging refers to replacing, adding, upgrading, and removing hardware devices without shutting down the system or power supply. Hot plugging of PCIe is a kind of "no surprise" strategy, that is, when the user unplugs the interface card, you must first notify the system.

- A. False
- B. True

Answer: B

NO.20 Which of the following are correct regarding the Huawei OceanStor 9000 V100R001C30 products for video monitoring services? (multiple choice)

- A. After the user turns on the securevideo feature, the file corruption event has been reported while reading and writing files, and the data recovery failure alarm is no longer reported
- B. The user turns on the securevideo feature, with two data corruptions if the data disk uses a 4 + 1 protection level and only 3 for a write operation
- C. Users open the securevideo feature data consistency scanning, the system does not complete the data files, will be cleaned up
- D. To improve the reliability of the video data storage device, the user turns on the securevideo feature of the data disk using a 4 + 1 protection level

Answer: A,D
